

- PROSPECT -

ALGACID

- bottles x 30 ml, 1 L -

COMPOSITION:

100 ml solution contains: - 10 g Boric acid

INDICATIONS:

Due to the boric acid, the solution decreases the Ph of the water, inhibiting the development of blue algae (this algae are developing only in alkaline environment).

MODE OF ADMINISTRATION:

It is administered in the aquarium water.

Add 30 – 40 drops (1 ml) of Algacid to 5 liters of water (1 bottle to 150 liters of water). In case of alkaline water, repeat the dose 2 or 3 times, at intervals of 4 to 6 days. The already developed algae on the walls of the aquarium must be removed with the help of the algae razor. The solution must be shaken before use.

PRECAUTIONS:

Avoid contact on eyes. Do not swallow, Keep out of reach of children. Do not reuse the empty bottle.

STORAGE:

Store in well closed packaging, at room temperature (15-25 C°).

VALIDITY:

2 years, stored in its original container, under the prescribed rules.
